Wings with opaque streak at distal third of costal margin, the inner area much expanded to the entire exclusion of the distal part of the discoidal. Anterior and middle funaria of the ♀ slender, of the ♂ stout.

Genital segment of ♂ very like that of D. viridis; ovipositor of ♀ with the inferior tooth of the lower valves smaller than in viridis.

In color varying from light olivaceous green to dark greenish brown, with a dark brown stripe from hind margin of eyes along the sides of the pronotum, sometimes continued upon the humeral field of the tegmen. On the pronotum and head this stripe is usually about one-fourth the width of the side of the pronotum but sometimes becomes barely perceptible; it sometimes appears upon the disk as a narrow line just within the lateral carinae of the metazona.

Antenna. Teg., teg.<H. fem. Body. Total length. ♂ 7.5-8 10 20.5 16 ♀ 5 12.3 12 4 20.5-21 10

Described from 5 ♂, 2 ♀ 1 ♂. Anglessea, N. J., labelled by Prof. L. Bruner, received from Prof. J. B. Smith. 1 ♂, 1 ♀. Ravenswood, L. I., Beutenmüller; 1 ♂. Ga.; 1 ♂. Md.; 2 ♂ without locality; — all these latter from Mr. Scudder’s collection.

This species agrees with the description of occidentalis in the form of the pronotum and disposition of the lateral carinae, but the median carina is not sufficiently elevated to be properly called suberistiform, and the vertex of the head is distinctly depressed behind the front margin, a character in which it differs markedly from the description of mysticus which occidentalis is stated to closely resemble. In superficial appearance the female recalls the short-winged form of Sten. curtipes, from which it is readily distinguished by the absence of foveolae.
THE SEVENTH VOLUME OF PSYCHE

Began in January, 1894, and continues through three years. The subscription price (payable in advance) is $5.00 per volume, or $2.00 per year, postpaid. The numbers will be issued, as in Vol. 6, on the first day of every month and will contain at least 12 pages each. No more than this was promised for the sixth volume but the numbers have actually averaged more than 16 pages, and in addition 21 plates have been given and more than 50 other illustrations. We prefer to let performance outrun promise, but when a larger subscription list warrants it, we shall definitely increase the number of pages.

Vols. 1-6, Complete, Unbound, - Now sold for $29.00.
Vols. 1-6, and Subscription to Volume 7, - $33.00.

The Butterflies of the Eastern United States and Canada.

With special reference to New England. By SAMUEL H. SCUDDER.

Illustrated with 96 plates of Butterflies, Caterpillars, Chrysalids, etc. (of which 41 are colored) which include about 2,000 Figures besides Maps and Portraits. 1958 Pages of Text.
Vol. 1. Introduction; Nymphalidae.
Vol. 3. Appendix, Plates and Index.

The set, 3 vols., royal 8vo, half levant. $75.00 net.
